

### **SPECIFICATION**

Please replace the paragraph appearing in the “Substitute Specification - Clean Version” on page 10, lines 20-22 with the following amended paragraph:

Additionally, the drop-out plate 7 has a raised portion 74 (~~not shown in FIG. 2~~), e.g., grooves, making it possible to distribute the water over the surface of the plate, then the lip and, as a result, the filter 5.

Please replace the paragraph appearing in the “Substitute Specification - Clean Version” on page 11, lines 1-4 with the following amended paragraph:

Preferentially, sandwiched between the bottom of the chamber 1 and the base of the liner 8 is a pad 82, which may consist of an open-cell material (not shown), making it possible to control the water-flow attenuation between the bottom and the liner.

Please replace the paragraph appearing in the “Substitute Specification - Clean Version” on page 11, lines 9-11 with the following amended paragraph:

Extraction means 100 are associated with the drain-off points 10. It is noted that these drain-off points may be situated level with the bottom of the chamber (and not necessarily underneath this bottom).
